

Learning and Teaching Enhancement Strategy

for students

UHI's commitment to an exceptional student learning experience

LTE Values

The Strategy is based around a set of **10 values** that you should **expect to see** within your course **whatever your subject, level or location of study.**

Co-designed with you

The Strategy was developed in **collaboration with students and staff from across UHI** and reflects the **needs of our students** and the **range of courses** that we offer.

Future focussed

The values in the Strategy align with the **University's Graduate Attributes** and **Skills Developments Scotland's Skills 4.0**. These two frameworks **outline the skills that you will need to thrive in the future**. Through the Strategy we are committed to **help you develop these** throughout your learning experience.

Learning and Teaching Enhancement Values

Supporting the learner as an individual

Connecting learning across communities

Authentic assessment and meaningful feedback

Integrated and sustainable learning and teaching

Engaging students in reflection and research

Celebrating diversity through learning and teaching

Learning for personal growth and employment

Harnessing open education approaches

Enriching learning through digital practices

Supporting flexible and student-centred learning

You should experience all of these **Values** within your learning, teaching and assessment activities during your time with UHI. The **Enabling Practices** describe the activities that your lecturers and support staff should engage in to ensure your experience is current, engaging and meaningful.
